

## To add multiple targets in prometheus.yml file using a script

Step1:-Clone argoid-infra-configs repository

```
[vasu1@argoid-ansible-1a ~]$ git clone https://[REDACTED]@bitbucket.org/argoid_ai/argoid-infra-configs.git
Cloning into 'argoid-infra-configs'...
```

step2:- go to the Prometheus scripts directory

```
cd argoid-infra-configs/prometheus_scripts/
```

step3:-

create a list of instance IPs that you want to add in prometheus.yml file as shown below

```
vi list
```

**prometheus\_rules\_adding.sh**

```
[vasu1@argoid-ansible-1a prometheus_scripts]$ vi ~/list
```

step4:-

Give the IPs as shown below

192.0.2.3

192.0.2.4

192.0.2.5

192.0.2.6

~

~

~

~

~

~

~

~

step5:-Run the Prometheus command as shown below

```
./prometheus_rules_adding.sh ~/list >> ~/prometheus.yml
```

In the above command, you have to give the path of the list wherever it is

and also the path of the prometheus.yml file wherever it is
