

Postgres-Exporter Installation

- Make sure docker is installed - [Docker Installation](#)
- Run Postgres-Exporter docker container , Provide Postgres Username and password in DATA_SOURCE_NAME,

```
sudo docker run --name postgres-exporter -e DATA_SOURCE_NAME="postgresql://<postgres_username_here>:  
<postgres_password_here>@<postgres_vm_ip_here>:<postgresdb_port_here>/?sslmode=disable" -p 9187:9187  
wrouesnel/postgres_exporter
```

- The complete command should look like this

```
sudo docker run --name postgres-exporter -e DATA_SOURCE_NAME="postgresql://postgres:postgres@10.0.0.31:5432/?sslmode=disable" -p 9187:9187 wrouesnel/postgres_exporter
```

- Execute this command to auto restart the container if it stops
`sudo docker update --restart=always postgres-exporter`
