HAProxy-Exporter Installation

- Make sure docker is installed [Docker Installation](#)
- Run haproxy-exporter docker container ,
  Supply:
  HAProxy Frontend URL in `--haproxy.scrape-uri`

  ```
  docker run -itd -p 9101:9101 --name haproxy-exporter  prom/haproxy-exporter:v0.12.0 --no-haproxy.ssl-
  verify  --haproxy.scrape-uri="http://<haproxy_ip:haproxy_frontend_port>/haproxy?stats;csv"
  ```

- Full command should look like this
  ```
  docker run -itd -p 9101:9101 --name haproxy-exporter --restart unless-stopped  prom/haproxy-exporter:v0.
  12.0 --no-haproxy.ssl-verify  --haproxy.scrape-uri="https://192.0.1.31/haproxy?stats;csv"
  ```
- Execute this command to auto restart the container if it stops
  ```
  sudo docker update --restart=always haproxy-exporter
  ```
